ACADEMIC EMPLOYMENT

- 2019 - 20 Kreitman Post-Doctoral Fellowship, Ben-Gurion University
- 2019 - 20 Levinsky College of Education, lecturer
- 2017 - 19 Post-Doctoral Researcher, Bar-Ilan University (ISF Project: 'The Life Sciences in Early Modern Philosophy', PI: Prof. Ohad Nachtomy)

EDUCATION

- 2011-2017 Ph.D. in Philosophy, Indiana University Bloomington.
Minor in Germanic Studies
Dissertation: *Kant's Theoretical Conception of God*
- 2009-10 Visiting student, University of Chicago
- 2002-6 M.A. in Philosophy. *Summa Cum Laude*, Tel Aviv University
Thesis: "On the Notion of the Interesting: Aspects in Aesthetics"
Advisor: Eli Friedlander
- 1998-2002 B.A. in Philosophy. *Magna Cum Laude*, Tel Aviv University

AREAS OF SPECIALIZATION

Kant, Early Modern Philosophy

AREAS OF COMPETENCE

Ethics, Political Philosophy, Aesthetics, Philosophy of Religion, Metaphysics, 19th Century European Philosophy, Existentialism

DISSERTATION SUMMARY: *KANT'S THEORETICAL CONCEPTION OF GOD*

My dissertation argues for the conceptual unity and historical continuity of Kant's theoretical conception of God. I show that there is a single concern guiding Kant's construal of this conception which is traceable early on from the pre-critical writings, that of grounding the unity and necessity of the laws of nature. I examine how Kant's critical adaptation of the rationalistic positions related to this concern enables him to transform the conception of God from an object of metaphysical inquiry into a regulative idea of reason. My interpretation thus explains the connection, mostly ignored in the literature, between the rationalist metaphysical conception of God and the regulative role it affords in the critical system.

DISSERTATION ABSTRACT: KANT'S THEORETICAL CONCEPTION OF GOD

Kant is famous for his criticism of all theoretical proofs for the existence of God. Yet he regarded the theoretical conception of God as highly significant, stemming from the very nature of rationality. My dissertation explains this significance by arguing for the conceptual unity and historical continuity of Kant's theoretical conception of God. I maintain that the core idea that guided Kant in construing the theoretical conception of God is the grounding of the unity and necessity of the laws of nature. I show that this conception is traceable early on from the pre-critical writing, and explain how it is transformed from an objective metaphysical claim into a regulative idea directing scientific inquiry in the *Critique of Pure Reason*.

The first part expounds the role of the conception of God in the pre-critical writings (1755-1770, before the publication of the *Critique of Pure Reason* in 1781). While criticizing the prevailing proofs, Kant developed his own a priori proof for the existence of God (the *possibility proof*). In the first chapter, I survey the background of Kant's possibility proof in the rationalist tradition and offer a reconstruction and assessment of it. In chapter 2, I present the metaphysical picture entailed by Kant's argument. I argue that it is a development of the Leibnizian conception of God, a mind comprehending all essences (often described as Platonic ideas), rather than a Spinozistic conception as argued by some recent scholars. This interpretation is further vindicated by considering the role God plays in the pre-critical theories of teleology and causality as an explanatory ground for the lawfulness of nature. In chapter 3 I discuss Kant's refutations of the other theistic proofs, the ontological and the cosmological, to show how they stem from the conception advanced by the possibility proof.

In the second part, I discuss Kant's conception of God in the *Critique of Pure Reason* by focusing on the fate of the pre-critical possibility proof. I explain why on the one hand its objective status as a proof for the existence of God is denied, while on the other hand, the conception underlying it receives a positive regulative role. In chapter 4 I present background key concepts of Kant's *Transcendental Idealism* and argue that there is a certain conception of a thing-in-itself which correlates with the demands of reason and is best represented in the idea of God. In chapter 5 I present the metaphysical content of the conception of God through its construal as the *Ideal of Reason*, a metaphysical ground for the conceptual individuation of all things. In continuity with the pre-critical conception, God fulfills this role in virtue of grounding the content of all possibility, the essences of things. I use this account to explain Kant's opaque refutation of the objective status of the pre-critical possibility proof. In chapter 6 I explain the regulative role of the idea of God in theoretical inquiry. I argue that an adequate understanding of the regulative role depends on the specific metaphysical content presented in the previous chapters, rather than an expression of mere systematic unity, or a hypothesis of an intelligent designer. The theoretical conception of God expresses the regulative principles of scientific inquiry because it represents a metaphysical ground for the content, unity, and necessity of the laws of nature. I conclude by deriving from my interpretation of regulative ideas an account of the epistemic justification of metaphysical pictures in general, an account I dub as *regulative metaphysics*.
